

Every dog deserves a happy, healthy life — especially those who have faced hardship before finding a forever home. While adoption is just the beginning of a new chapter for our wonderful dogs, many still need ongoing medical care, including costly medications to treat chronic conditions, past injuries, or age-related health issues.

BTRF works hard to ensure every adopted dog continues to get the care they need, even after they've gone to loving homes. With rising veterinary and medication costs, we are finding it difficult to find homes for dogs with pre-existing medical needs as the insurance companies just won't cover these costs for new owners.

Chipper is four years old and fractured his leg when he was a puppy, he will need pain medication for the rest of his life.

Pansy is six years old and has typical beddie allergies, she will need Cytopoint injections for the rest of her life.

Tegan is seven years old and has a spinal injury, she will need medication and treatment for the rest of her life.

Doogal is nine years old and has Copper Toxicosis, he will need quarterly blood tests and a special diet for the rest of his life.

Eddy and Pippin are just very old now and age related medication and treatments are vital to keep them comfortable for the rest of their lives.

YOU CAN HELP THE BTRF ADOPTED DOGS ...

We know that not everyone is in a position to adopt or foster a dog but you could help bridge the gap.

Your commitment to a regular donation — big or small — will go directly towards covering essential medication and treatments for our adopted dogs.

From the very necessary medication for the all too common Beddie allergies, to arthritis medication and supplements, your support will ensure they stay happy, healthy and pain-free in their new forever homes.

YOU CAN MAKE A DIFFERENCE ...

Please consider a regular donation today — this will help BTRF find homes for dogs with pre-existing medical conditions. There are so many lovely homes waiting to adopt a dog but who just can't cover the cost of a pre-existing condition.
